

ADITYA SURYA PUTRA

yasurtraadityasuryaputra09@gmail.com | github.com/VeldanDev

EDUCATION

Politeknik Negeri Medan, D3 Teknik Komputer (Computer Engineering)

Expected 2026

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL

AI / ML: OpenAI API, TensorFlow, OpenCV, MediaPipe, face recognition

Web / Backend: React, Next.js, Node.js, Elysia, Bun, Prisma, Tailwind CSS, RESTful APIs, Git

Other: Model Context Protocol (MCP), AI agents and tool use, SQLite FTS5, RFID/IoT integration, TCP/IP networking

PROFESSIONAL EXPERIENCE

IT Development Intern, PT Rezeki Teknologi Indonesia, Medan, Indonesia

Jan 2026 – Mar 2026

- Wrote a Node.js scraper that extracted business names, addresses, phone numbers, and map links from Google Maps for company market research, replacing manual data collection
- Installed and wired an RFID-based access-control system for a residential barrier gate, integrating a LORA-BG200 controller and EM-18 RFID reader over a configured static-IP network connection to the management server
- Traced a sensor fault to electromagnetic interference from nearby power cables and fixed it by rerouting the signal lines, restoring consistent vehicle detection
- Set up product listing pages and a structured catalog for the company's e-commerce platform, entering and organizing its full parking-hardware product line

Technologies: Node.js, RFID/IoT hardware, TCP/IP networking, e-commerce CMS

PROJECTS

Tiburon: Personal AI agent and automation system

Personal

- Built a tool-using agent loop in Python where the model chooses among corpus search, file access, shell, web fetch, and Telegram tools, capped at 20 steps with a guard that blocks destructive shell commands
- Added a Telegram approval gate that pauses high-impact actions (writing files, running commands, sending messages) until the owner replies yes or no
- Indexed about 46,000 text chunks from tech videos, books, and notes with SQLite FTS5 and BM25 ranking for offline search, then added automation on top: a lead finder that pulls businesses from OpenStreetMap, checks their websites, drafts outreach with an LLM, and reports replies to Telegram

Technologies: Python, SQLite FTS5, OpenRouter, Ollama, Telegram Bot API, OpenClaw

SpectreCLI: Biometric OSINT Framework

Personal

- Wrote a CLI security-research tool that gates OSINT reconnaissance modules (IP geolocation, phone and domain lookup, DNS/WHOIS) behind face-recognition and hand-gesture authentication
- Targeted constrained hardware (Raspberry Pi Zero 2 W), with JSON-based audit logging for every scan and authentication attempt

Technologies: Python, OpenCV, MediaPipe, face_recognition

agenttrace: Observability CLI for AI coding agents

Personal

- Made a TypeScript CLI that hooks into an AI coding agent's tool-use events, logs every action to a local session file, and replays sessions as a terminal timeline with duration and token-cost estimates

Technologies: TypeScript, Node.js, vitest

Scepter: CLI health-check tool for MCP servers

Personal

- Published an open-source CLI (npm: scepter-mcp) that audits Model Context Protocol server health, security signals, and version trends, including a self-check scoring the package's own MCP integration

Technologies: TypeScript, Node.js, npm
